

Serving our clients with integrity and excellence since 1978!

Civil Engineering

Our goal is to develop long-term client relations through open communication, efficiency, and quality work. Exceeding the project expectations begins by communicating with our clients throughout the project to understand the project goals, schedule, budget, and coordinating with the agencies to understand the regulatory requirements and site constraints.

Licensed in Nevada and California, RCI has excellent working relationships with each of the local, state and federal agencies we work with and whose jurisdictions we provide services within. These relationships combined with our diverse expertise and commitment to excellence is how we achieve success for our clients.

RCI understands we are part of a team and our role is to provide civil engineering expertise in support of our client goals. Whether working directly with our client, or through an architect as a part of a design team, we appreciate the value of teamwork and strive to promote collaboration.

RCI has the expertise to take projects from planning and conceptual design, through permitting, improvement plans, and construction administration. Our experience with municipal, industrial, commercial and residential projects ensures RCI meet the needs of all clients. Our success is measured by the success of our clients.
